# Beckmann and Ling's Obstetrics and Gynecology 8th Edition

By Dr. Robert Casanova

## Table Of Contents

### SECTION I General Obstetrics and Gynecology

- Chapter 1 Women's Health Examination and Women's Health Care Management
- Chapter 2 The Obstetrician–Gynecologist's Role in Screening and Preventive Care
- Chapter 3 Ethics, Liability, and Patient Safety in Obstetrics and Gynecology
- Chapter 4 Embryology and Anatomy

### SECTION II Obstetrics

- Chapter 5 Maternal–Fetal Physiology
- Chapter 6 Preconception and Antepartum Care
- Chapter 7 Genetics and Genetic Disorders in Obstetrics and Gynecology
- Chapter 8 Intrapartum Care
- Chapter 9 Abnormal Labor and Intrapartum Fetal Surveillance
- Chapter 10 Immediate Care of the Newborn
- Chapter 11 Postpartum Care
- Chapter 12 Postpartum Hemorrhage
- Chapter 13 Multifetal Gestation
- Chapter 14 Fetal Growth Abnormalities: Intrauterine Growth Restriction and Macrosomia
- Chapter 15 Preterm Labor
- Chapter 16 Third-Trimester Bleeding
- Chapter 17 Premature Rupture of Membranes
- Chapter 18 Post-term Pregnancy
- Chapter 19 Ectopic Pregnancy and Abortion

### SECTION III Medical and Surgical Disorders in Pregnancy

- Chapter 20 Endocrine Disorders
- Chapter 21 Gastrointestinal, Renal, and Surgical Complications
- Chapter 22 Cardiovascular and Respiratory Disorders
- Chapter 23 Hematologic and Immunologic Complications
- Chapter 24 Infectious Diseases
- Chapter 25 Neurologic and Psychiatric Disorders

### SECTION IV Gynecology

- Chapter 26 Contraception
- Chapter 27 Sterilization
- Chapter 28 Vulvovaginitis
- Chapter 29 Sexually Transmitted Infections
- Chapter 30 Pelvic Support Defects, Urinary Incontinence, and Urinary Tract Infection
- Chapter 31 Endometriosis
- Chapter 32 Dysmenorrhea and Chronic Pelvic Pain
- Chapter 33 Disorders of the Breast
- Chapter 34 Gynecologic Procedures
- Chapter 35 Human Sexuality
- Chapter 36 Sexual Assault and Domestic Violence

### SECTION V Reproductive Endocrinology and Infertility

- Chapter 37 Reproductive Cycles
- Chapter 38 Puberty
- Chapter 39 Amenorrhea and Abnormal Uterine Bleeding
- Chapter 40 Hirsutism and Virilization
- Chapter 41 Menopause
- Chapter 42 Infertility
- Chapter 43 Premenstrual Syndrome and Premenstrual Dysphoric Disorder

### SECTION VI Gynecologic Oncology and Uterine Leiomyoma

- Chapter 44 Cell Biology and Principles of Cancer Therapy
- Chapter 45 Gestational Trophoblastic Neoplasia
- Chapter 46 Vulvar and Vaginal Disease and Neoplasia
- Chapter 47 Cervical Neoplasia and Carcinoma
- Chapter 48 Uterine Leiomyoma and Neoplasia
- Chapter 49 Cancer of the Uterine Corpus
- Chapter 50 Ovarian and Adnexal Disease

## **Beckmann and Ling's Obstetrics and Gynecology Edition 8th edition Test Bank**

### **Chapter 1: Women's Health Examination and Women's Health Care Management**

1:

Elevating the head of the examining table approximately 30 degrees facilitates

- e. in visits where a specific indication is noted

4:

Peau d'orange change in the breast is associated with

- a. edema of the lymphatics
- b. jaundice
- c. too vigorous breastfeeding
- d. overly tight undergarments
- e. galactorrhea

5:

Which kind of speculum is often most suitable for examination of the nulliparous patient?

- a. Morgan's speculum
- b. Endoscopic speculum
- c. Ling speculum
- d. Graves speculum
- e. Pederson speculum

6:

Which uterine configuration is most difficult to assess for size, shape, configuration, and mobility?

- a. Midposition
- b. Anteverted
- c. There is no difference in difficulty
- d. Retroverted

7:

Which type of speculum is most appropriate for the examination of a parous menstrual woman?

- a. Ling speculum
- b. Graves speculum
- c. Pederson speculum
- d. Endoscopic speculum
- e. Morgan's speculum

8:

Menopause is defined as the cessation of menses for greater than

- a. 9 Months
- b. 36 Months
- c. 12 Months
- d. 18 Months
- e. 24 Months

9:

In a woman describing sufficiently frequent sexual encounters, infertility typically is described as a failure to conceive after

a:

3 months

b:

9 months

c:

12 months

d:

18 months

e:

6 months

10:

During bimanual examination of the adnexa in normal premenopausal women, the ovaries are palpable

a:

all the time

b:

almost never

c:

about one-half of the time

d:

about three-quarters/most of the time

e:

about one-quarter of the time

11:

If a patient becomes uncomfortable with a topic during a history-taking session, the best response of the physician is to

a:

Palpation is done first

b:

Palpation and inspection are done simultaneously

c:

Palpation is only done if inspection is abnormal

d:

Palpation may be done with detailed inspection if a woman is especially modest

e:

Inspection is done first

13:

Questions that promote the physician's fullest understanding of the patient's situation are best characterized as

a:

compassionate

b:

chronological

c:

sympathetic

d:

emphatic

e:

evidence based

14:

The last menstrual period is dated from the

a:

first day of the last normal period

b:

last day of the last normal period

c:

first day of the last bleeding episode

d:

last day of the last bleeding episode

15:

The passage of clots during menstruation

a:

is always abnormal

b:

may be either normal or abnormal

c:

is always normal

d:

is extremely rare

16:

In the abbreviation of the obstetric history-G[1] P[2] [3] [4] [5]-"1" stands for the number of

a:

living children

b: pregnancies

c:

term pregnancies

d:

preterm pregnancies

e:

abortions

17:

In the abbreviation of the obstetric history-G[1] P[2] [3] [4] [5]-"2" stands for the number of

a:

living children

b:

pregnancies

c:

term pregnancies

d:

preterm pregnancies

e:

abortions

18:

In the abbreviation of the obstetric history-G[1] P[2] [3] [4] [5]-"3" stands for the number of

a:

living children

b: pregnancies

c:

term pregnancies

d:

preterm pregnancies

e:

abortions

19:

In the abbreviation of the obstetric history-G[1] P[2] [3] [4] [5]-"4" stands for the number of

a:

living children

b:

pregnancies

c:

term pregnancies

d:

preterm pregnancies

e:

abortions

20:

In the abbreviation of the obstetric history-G[1] P[2] [3] [4] [5]-"5" stands for the number of

a:

living children

b:

pregnancies

c:

term pregnancies

d:

preterm pregnancies

e:

abortions

21:

Tanner's classification with respect to the breast relates to changes in the breast

a:

before and after lactation

b:

associated with malignancy

c:

associated with maturation

d:

associated with galactorrhea

e:

associated with fibrocystic changes

22:

The rectovaginal examination should be performed

a:

after 52 years of age

b:

at the initial patient visit

c:

only for the evaluation of chronic pelvic pain

d:

only when there are symptoms of pelvic relaxation

e:

at intervals of 5 years

23:

In the gynecologic history, it is often possible to distinguish between vaginitis and pelvic inflammatory disease by inquiring about

a:
